PROJECTS

E-Commerce site
Full-stack project. Front end using Html, CSS, JS, Bootstrap and React. Back end using NodeJS, ExpressJS, MongoDB. Implemented features which e-commerce should have. Made custom APIs. Source code on github.

Online Dating website UI
Created the responsive front-end UI of Online Dating Website using HTML, CSS and Bootstrap. Contains features, navbar, sections, etc. Source code on github.

Song Player Site
HTML, CSS and JavaScript used. JavaScript is used for DOM. Implemented features like play/pause, current song, next/previous song, master player, song list, etc. Source code on github.

The simon game(memory game)
Created using HTML, CSS and JavaScript. A memory game. Function according to player's input whether it is right or wrong. Reset based on player's input. Source code on github.

Database for Online GameZone
SQL project. Created a database for online Game Zone data management with proper SRS documentation. PostgreSQL is used at server side. Performed queries related to database.

Human-Computer Interaction
Research project. Study the mobile phone interaction patterns among elderly people. Found some major problems. Proposed some solutions for easy interaction.

Personal portfolio site
Made personal responsive portfolio site using HTML, CSS and JavaScript. Simple site with navbar containing About, Education, Projects, Contact, etc.
